Material Tester Certification

Specialisations

Material Tester Certification

- Draw from storage and assemble testing apparatus for the relevant test,
- Check compliance of apparatus to specifications of test method,
- Execute laboratory and housekeeping activities,
- Organise samples, data information and documentation,
- Conduct sampling and field testing of bituminous binders,
- Extract a representative and sized test sample,
- Determine the properties of bituminous base binders,
- Determine the properties of modified bituminous binders,

Bitumen Tester

Ball penetration; texture depth; sampling of base bituminous binders, cut-backs and emulsions; sampling of modified bituminous binders; divide a sample using the riffler; by quartering; softening point; penetration; viscosity; sample and prepare modified binders samples & the elastic recovery of modified bituminous binder

Material Tester Certification

- Draw from storage and assemble testing apparatus for the relevant test,
- Check compliance of apparatus to specifications of test method,
- Execute laboratory and housekeeping activities,
- Organise samples, data information and documentation,
- Conduct sampling and field testing of fresh and hardened concrete,
- Extract a representative and sized test sample,
- Determine the properties of fresh and hardened concrete,

Concrete tester

Sample of fresh concrete; divide a sample using the riffler; by quartering; density of compacted freshly mixed concrete; compressive strength of hardened concrete, incl making and curing of specimen

Material Tester Certification

Asphalt Tester

- Draw from storage and assemble testing apparatus for the relevant test
- Check compliance of apparatus to specifications of test method
- Execute laboratory and housekeeping activities,
- Organise samples, data information and documentation,
- Conduct sampling and field testing of asphalt,
- Extract a representative and sized test sample,
- Determine the properties of asphalt

Sampling of Previously Blended (ready mixed) Asphalt; sampling of Asphalt from completed layer; handle and maintain a nuclear density gauge; in-situ density of compacted asphaltic materials; divide a sample using the riffler; by quartering; produce asphalt briquettes; Marshall stability, flow and quotient; indirect tensile strength of asphalt; bulk density and void content of compacted asphalt; maximum void-less density of asphalt mixes and the quantity of binder absorbed by the aggregate; soluble binder content and particle size distribution

Material Tester Certification

- Draw from storage and assemble testing apparatus for the relevant test,
- Check compliance of apparatus to specifications of test method,
- Execute laboratory and housekeeping activities,
- Organise samples, data information and documentation,
- Conduct sampling of aggregates,
- Extract a representative and sized test sample,
- Determine particle distribution and particle shape of aggregates,
- Determine the density and strength of aggregates

Sampling from Stockpiles; from Conveyor Belts; divide a sample using the riffler; by quartering; particle size distribution; average least dimension; flakiness index; bulk density, apparent density and water absorption retained on the 5 mm sieve; passing the 5 mm sieve; bulk density of aggregates; aggregate crushing value (ACV) and 10 % FACT

Aggregate tester

Material Tester Certification

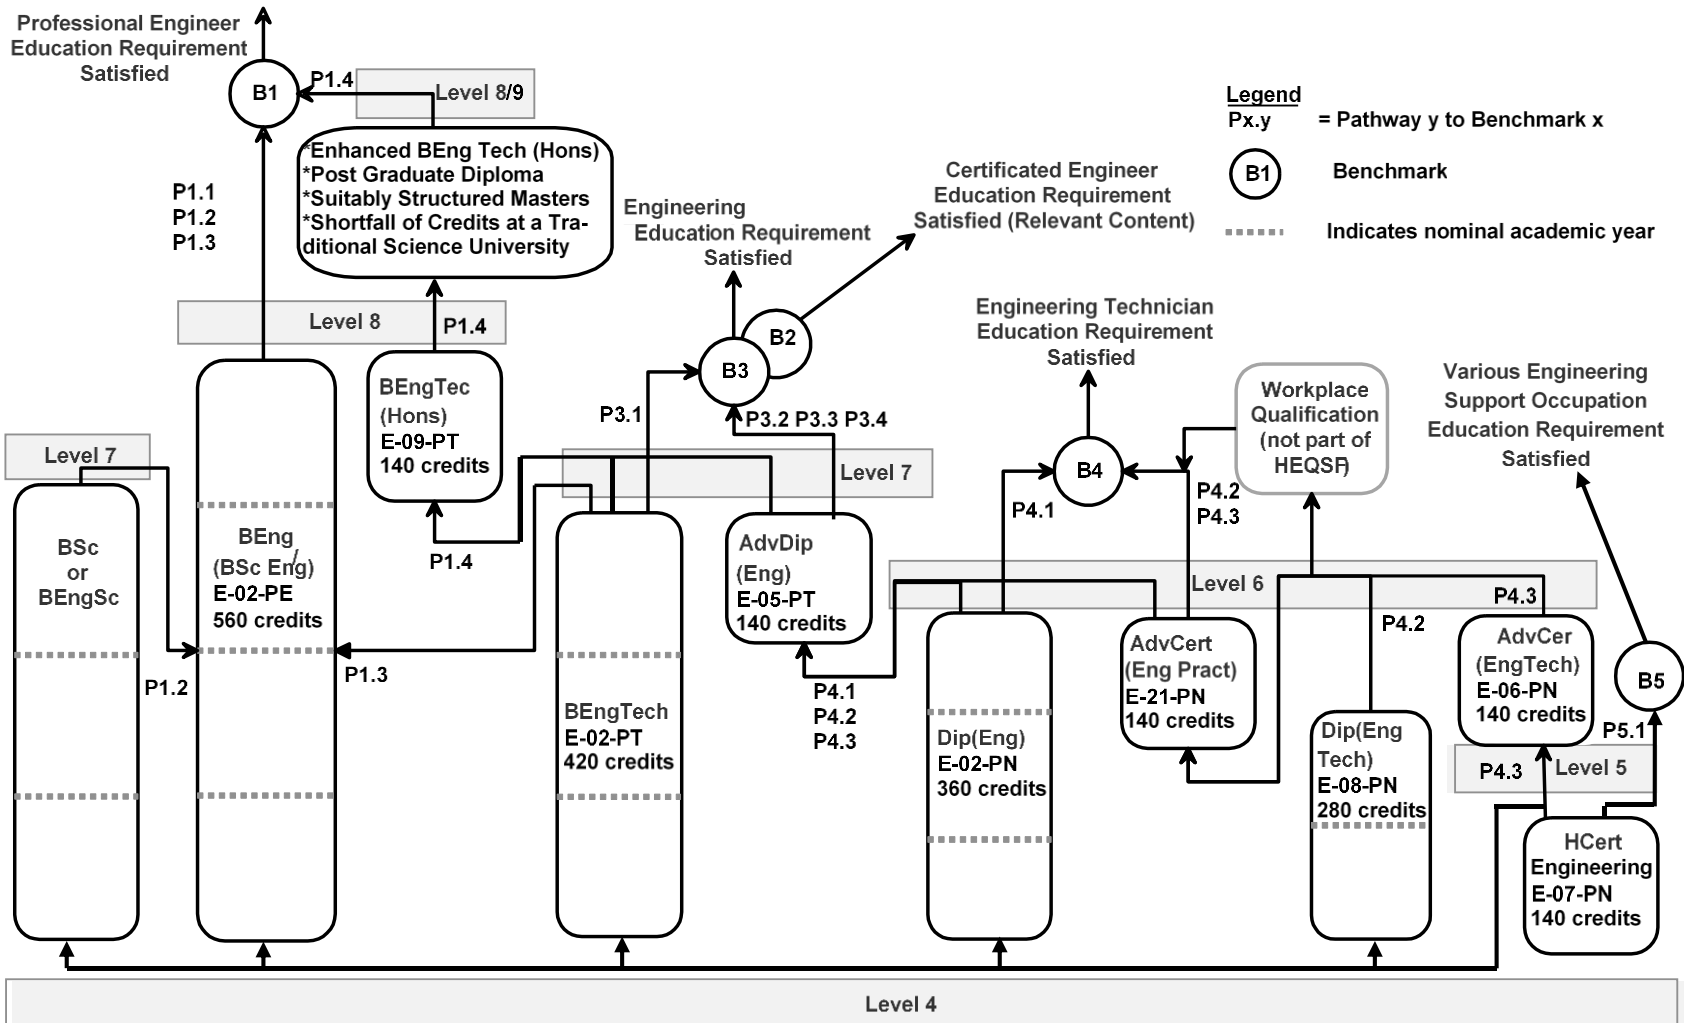

- Draw from storage and assemble testing apparatus for the relevant test,
- Check compliance of apparatus to specifications of test method,
- Execute laboratory and housekeeping activities,
- Organise samples, data information and documentation
- Conduct sampling of soils, gravels and crushed stone materials,
- Conduct field testing of compacted and uncompacted fill and pavement layers,
- Extract a representative and sized test sample,
- Determine particle size distribution and Atterberg Limits of soils, gravels and crushed stone materials,
- Determine the density of soils, gravels and crushed stone materials,
- Determine compaction and strength characteristics of untreated soils, gravels and crushed stone materials

Sampling of soils, gravels and crushed stone of treated pavement layers; of untreated road pavement layers; and from stockpiles; handle and maintain a nuclear density gauge; in-situ density; divide a sample using the riffler; by quartering; particle size distribution; hydrometer; two-point liquid limit, plastic limit, plasticity index and linear shrinkage; soil-mortar %, coarse sand ratio, GM & FM; handling sieves; moisture content; maximum dry density & optimum moisture content; California Bearing Ratio; unconfined compressive strength; indirect tensile strength

Soils, gravel and Base Course Materials Tester

Form R-05-ER-3C

Engineering Report (ER)

Use this form to report in about 100 words per criterion under Outcomes 1 to 11 below [on a report or recording task](#), part of a project or complete project to which [the applicant](#) [has](#) made a significant contribution. The report may cover conceptualization, design and analysis, specification, tendering and adjudication, manufacturing, project and construction management, commissioning, maintenance, measurement and testing or planning at a specifically-defined level. Please also provide [a website address](#), [references](#), drawings, etc. as an addendum which is limited to two A4 pages.

Use Appendix A of the Discipline Specific Training Guide R-05-CLTC-3C to assist in the interpretation of the criteria

Name of Applicant:	
Detail of Equipment Applicable and/or Work Responsibility: (<30 words)	
Date of Work Done:	
Engineering brief and objective: (< 30 words)	
Environment: Industry; Laboratory; Theory; Simulation, etc. in <15 words)	
Short Summary: (State engineering/ management problems; solutions in < 30 words)	
Budget: (<10 words)	

It is the responsibility of the user to ensure that the latest version is used. The latest version will be published on our website.

Page 12 of 27	SPECIFIED CATEGORY PRACTITIONER AS A REGISTERED <u>CIVIL</u> LABORATORY TECHNICAL CONTROLLER	
Form No.: APP-REG FORM CLTC-3C		
Effective Date: 1 April 2018		
Rev no: 0		

Specifically-defined engineering problems have the following characteristics:

- can be solved mainly by specific practical engineering knowledge, underpinned by related theory; **and one or more of:**
- are largely defined but may require feedback;
- are discrete, specifically focused tasks within engineering systems;
- are routine, frequently encountered and in familiar specified and sustainable context; **and one or more of:**
- can be solved by standardised or prescribed ways;
- are encompassed by specific standards, codes, legislation and documented procedures; requires authorisation to work outside limits;
- information is concrete specific and largely complete, but requires checking and possible supplementation;
- involve specific issues but few of these imposing conflicting constraints and a specific range of interested and affected parties; **and one or both of:**
- requires practical judgement in specific practice area in evaluating solutions, considering interfaces to other role-players;
- have consequences which are locally important but within a specified category (wider impact [see](#) dealt with by others).

Specifically-defined engineering activities have several of the following characteristics:

- Scope of specific practice area is defined by specific techniques applied; change by adopting new specific techniques into current practice;
- Practice area is located within a wider, complex context, with specifically-defined working relationships with other parties and disciplines;
- Work involves specific familiar resources, including people, money, equipment, materials, technologies;
- Require resolution of interactions manifested between specific technical factors with limited impact on wider issues;
- Are constrained by operational context, defined work package, time, finance, infrastructure, resources, facilities, standards and codes, applicable laws;
- Have risks and consequences that are locally important but are generally not far reaching.

Outcomes and Criteria	
Outcome 1: Define, investigate and analyse specifically-defined engineering problems encountered in the applicant's work:	
1.1 State how you understood the activity as agreed to with the client (or your supervisor).	
1.2 Describe how you analysed and clarified information, drawings, codes, procedures, etc.	
Outcome 2: Design, develop, plan or practise solutions to specifically-defined engineering problems (tasks) encountered in the applicant's work:	
2.1 Describe how you developed and analysed alternative approaches to do the work. Impacts and sustainability checked. (Calculations attached)	
2.2 State what the final solution to perform the work was, client or the applicant's supervisor in agreement.	
Outcome 3: Comprehend and apply knowledge embodied in established specific engineering practices and knowledge specific to the field in which the applicant practise:	
3.1 State what Higher Certificate level application standard , procedures and systems you used to execute the work and how often	

It is the responsibility of the user to ensure that the latest version is used. The latest version will be published on our website.

Page 15 of 27	SPECIFIED CATEGORY PRACTITIONER AS A REGISTERED <u>CIVIL</u> LABORATORY TECHNICAL CONTROLLER	
Form No.: APP-REG FORM CLTC-SC		
Effective Date: 1 April 2018		
Rev no: 0		

Form: R-05-SDSRR-CLTC

Sub-Discipline-Specific Requirements Report (SDSRR)

Use this form to report in about 100 words per statement under Requirements 1 to 6 below on the applicant's personal knowledge about the requirements.

Surname and Initials:	
DISCIPLINE-SPECIFIC COMPETENCE REQUIREMENTS:	
<p>There is a critical need in the industry to identify people who are able to conduct the essential operations associated with analysis and issuing of Civil Laboratory Test Results. This will lead to competence in the field of work and thereby add value to the industry and improve the economy of the country. It will also lead to a balanced society in that learners will understand how the work they do fits into the greater engineering industry.</p>	
Requirement 1: Communicate at work:	
1.1 State how you maintained and adapted your oral communication as required to promote effective interaction in a work context.	
1.2 State how you accessed information from standing instructions, visual information and a range of other workplace texts and how you responded appropriately within the context.	
1.3 State how you compiled written communication that was clear and unambiguous and at an appropriate level for designated target audiences.	
Requirement 2: Use mathematics and statistics in real life situations:	
2.1 Describe how you used mathematical functions correctly to solve routine workplace problems and tasks.	
2.2 Describe how you interrogated findings on life related problems in terms of their cause and solution.	
2.3 State how you effectively and accurately applied mathematical techniques in real life situations.	
Requirement 3: Interpolate Materials Properties from Test Result:	
3.1 Describe how you established the requirement for repeat of certain properties' tests. (Actual examples attached)	
3.2 State how you validate results before you sign and issue test results.	
3.3 Give your estimation of Materials Properties' values based on related test results. (Actual examples attached)	
Requirement 4: Take responsibility for the implementation of Quality Assurance for a Test Result:	
4.1 Describe how you made sure your inspections comply with laboratory best practice requirements.	
4.2 State how you understood the relevance of OHS and SANS	

Page 16 of 27	SPECIFIED CATEGORY PRACTITIONER AS A REGISTERED <u>CIVIL</u> LABORATORY TECHNICAL CONTROLLER	
Form No.: APP-REG FORM CLTC-SC		
Effective Date: 1 April 2018		
Rev no: 0		

requirements should be met in the laboratory.	
4.3 Describe how you identified unsafe working conditions and how you took corrective actions.	
4.4 State how you limited access to the workplace to involved personnel only.	
4.5 Describe how you linked test results to established QA procedures and test methods. (Actual examples attached)	
Requirement 5: Produce and maintain administrative reports:	
5.1 Describe how you generate, store and retrieve reports.	
5.2 Describe how you have used different paths for obtaining information for schedules.	
5.3 State how you implemented corrective action to improve quality of work conducted in the laboratory.	
5.4 State how you used administrative reports in providing administrative and financial control of the laboratory.	
Requirement 6: Manage Laboratory output:	
6.1 State how you prioritised tasks to meet testing timeframes and specific requirements.	
6.2 State how you used an analysis of work requirements to <u>substantiate</u> with relevant business plans and microenvironment.	
6.3 State how you identified potential risks that may affect laboratory performance and what appropriate actions you took.	No entry required. Assessment will be done against evidence submitted in Item 7.2 of the Engineering Report (Form R-03-ER-SC).
6.4 List the legislation that may impact on your work environment.	No entry required. Assessment will be done against evidence submitted in Item 7.1 of the Engineering Report (Form R-03-ER-SC).
6.5 Describe how you ordered and procured laboratory requirements in advance of being required.	

Signature of Applicant: _____ Date: _____

Signature of Mentor / Supervisor: _____

Name of Mentor/Supervisor printed: _____ Tel. No.: _____

Engineering Competence

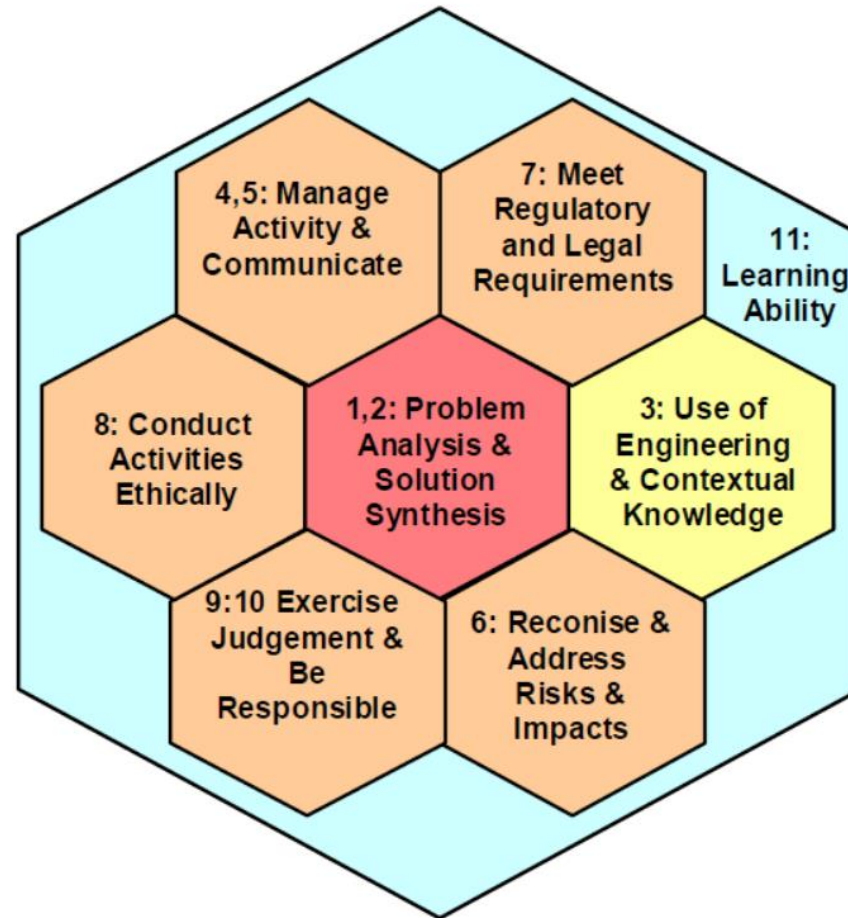

Figure 3: Visualising the interconnectedness of the outcomes that are evidence of engineering competence.

Sub-Discipline-Specific Requirements

1	Communicate at Work
2	Use mathematics and statistics in real life situations
3	Interpolate Materials Properties from Test Result
4	Take responsibility for the Implementation of Quality Assurance for a Test Result
5	Produce and maintain administrative reports
6	Manage Laboratory Output
